## EU REACH Regulation 1907/2006

Wainwright Instruments acts as a downstream user (producer of articles) according to the EC REACH Regulation 1907/2006. According to information from our suppliers, lead is the only substance in the most recently published SVHC candidate list that is contained in our products with a concentration of more than 0.1% by mass. The raw materials used in our brass housings contain 3% lead to improve their machinability and corrosion resistance. Our products are not intended to release any substances.

Terence Wainwright  
(Managing Director)
